SYSTEMS REQUIREMENTS

- Macintosh OSX 10.5.8 or 10.6.x
- Intel Processor
- 2 GB of available RAM
- Internet Connection

BENEFITS

- Supports Microsoft Publisher 2010, QuarkXPress 8 and InDesign CS5 file types
- Extract content from multiple documents simultaneously
- Export content to rich text format RTF or a plain text TXT file
- Native Desktop Publishing applications are not required to be installed

FEATURES

- Stand-alone application
- Index content easily within Apple Macintosh storage volumes
- Supports Microsoft Publisher 2010, QuarkXPress 8 and InDesign CS5 file types
- Desktop Search within Adobe InDesign, QuarkXPress and Microsoft Publisher files

PRODUCT OVERVIEW

PageZephyr is a unique content search liberation and publishing tool. **PageZephyr** has been developed with the premise that not all files are viewable PDF files. As a result of several years of experience and research with desktop search and publishing file formats, Markzware created a tool allowing users to access their content within those file types. Not even the big search engines like Google, Yahoo!, Bing – can do a content search in the document types that Markzware specializes in.

The idea behind **PageZephyr** desktop search is that content creators should be able to do what they want with their content. Often times, creating files in proprietary file types such as Adobe InDesign, QuarkXPress or Microsoft Publisher doesn't make it easy for users to find and access specific content. Users are often unable to open, edit and convert content in those file types to a different format, or even the internet.

PageZephyr liberates the content inside those file types, empowering users to finally access and utilize the data they own. If your hard-drive contains .indd, .qxd or .pub files **PageZephyr** will find them for you to edit. You won't receive the "Search complete, no files found" or 'cannot open – filename.indd' errors.

PageZephyr allows you to quickly build, or modify your valuable content for the goods or services you offer. Then, you can and distribute and market your content on the internet. After search engines index the content – more people can find your stuff – and that just might result in more sales.
