- Customizable font & image paths
- Scans, reports and packages the entire job

PRODUCT OVERVIEW

Markzware's **FlightCheck** is your graphic design prepress application used to manage quality control for print jobs and online export alike. This solution provides both native file and PDF preflight checking in one stand-alone application. **FlightCheck** is the essential tool for Print Shops, Creative Designers, Prepress Departments, Customer Service Reps and Graphics Professionals within the printing, digital print and publishing industries. This multi-award winning tool helps you prepare PDF and other documents for export or print.

FlightCheck helps you create excellent PDF files for brochures, advertisements, manuals, and virtually any printed document. It provides complete quality control saving designers, printers and publishers time and money by avoiding re-work.

FlightCheck preflights digital files thoroughly and warns you about potential printing problems while guiding you directly to them for repair. It issues a complete analysis of the print job highlighting potential errors, item by item, including wrong document size, missing fonts, incorrect colors, transparency of spot colors, incorrect image resolution and much more. **FlightCheck** then packages all required elements of the print job, such as images and fonts, to insure that files print as expected. It will even compress the collected job for you! [Try a demo](#) today!
